First Last:

I am writing to you regarding the IT BOH Development Intern position. I came across this posting on LinkedIn. I was delighted to notice this particular position as I intend to complete my studies in information security, web development, and business process management. I am seeking a challenging but rewarding part-time position in my area of interest.

As a fourth-year computer information systems student at the University of Louisville, I have acquired skills in programming, business communication, and data management. I have developed web sites including the use of HTML, CSS, and JavaScript, and I would like to further expand upon my knowledge of these languages. I have extensive experience writing in C# and using object-oriented programming to create complex automated integrations. More recently I am learning Python and SQL to interact with large quantities of data.

As a Jr Software Developer, I interface with clients on discovery, progress, and finalization meetings on a weekly basis. I am able to communicate ideas and understand requests before translating them into technical requirements. As a result, I was assigned and completed several projects that involved Web API integrations. I entered this industry over a year ago with limited experience, this has shown me that I am capable of learning on the job. I have the foundation that is necessary for success and can be trained to complete any task.

It would be a privilege to work for KFC as a Development Intern. I am eager to learn and gain experience operating in a collaborative work environment. You may reach me at **(502) 777-1160** and elwant01@louisville.edu on weekdays before 2:30 pm.

I am grateful to receive the opportunity to submit my application and I appreciate your time and consideration.

Sincerely,

Emily Wantland
